Mode Cursor
Signal Cursor

Battery indicator

SIGNAL STRENGTH

Press "mode key",choose noise control
Press "shift key", choose far

Signal sensitivity and intensity cursor
The relative intensity of received signal is divided into 15grads. The more the number shows, the stronger the signal is. Grade 11 shows "0".Between the strongest and weakest signals, please choose "shift" key appropriately and adjust sensitivity button to get the signal show "0" which is more suitable for observing the changing the signal during the period of locating.
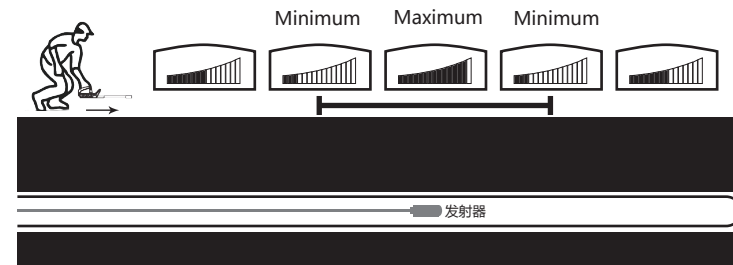

3 LOCATING

Maximum

Transmitter

Move the locator front and back along the axial direction of the transmitter to find the point of maximum sensitivity, on the basis of which, move the locator right and left to find the point of maximum sensitivity which is the location of the locator.

4 DEPTH MEASURING

Keep locator moving close to the ground along the axial direction of the transmitter.

Minimum   Maximum   Minimum

发射器

Half of the distance between two minimum is the depth from the ground to transmitter.
